-- TISSUE SPECIFICITY: V2 is found only in brain.
-- DEVELOPMENTAL STAGE: Disappears after the cartilage development.
-- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-- SIMILARITY: Contains 2 link domains.
-- SIMILARITY: Contains 2 EGF-like domains.
-- SIMILARITY: Contains 1 C-type lectin family domain.
-- SIMILARITY: Contains 1 Sushi (SCR) domain.
-- SIMILARITY: SELONGS TO THE AGGRECAN/VERSICAN PROTEOGLYCAN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 J. "cDNA cloning of PG-W, a large chondroitin sulfate proteoglycan expressed during chondrogenesis in chick limb buds. Alternative spliced multiforms of PG-M and their relationships to versican."

J. Biol. Chem. 268:14461-14469(1993).

-i- FUNCTION: May play a role in intercellular matrix. May take par the regulation of cell motility, growth and differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CARBOHYD

SUBCELLAULAR LOCATION: Type I membrane protein.
MISCELLANEOUS: CRDS 1-3 HAVE AT MOST VERY WEAK AFFINITY FOR CARBOHYDRAUTE. CRD 4 SHOWS THE HIGHEST AFFINITY BINDING AND MULTISPECIFICITY FOR A VARIETY OF MONOSACCHARIDES. AT LEAST (4, 5, AND 7) ARE REQUIRED FOR HIGH AFFINITY BINDING AND ENDOCYTOSIS OF MULTIVALENT GLYCOCONJUGATES.
SIMILARITY: Contains 8 C-type lectin family domains.
SIMILARITY: Contains 1 rigin B-type lectin domain.
